Executive Summary

Final-year Computer Science student skilled in full-stack development, computer vision, and Python application design. Currently interning in Full Stack Development at NoviTech R&D, where I build and ship production-style projects end to end. The role calls for strong practical coding ability, independent problem-solving, and comfort turning ideas into working software — all of which I've demonstrated through a self-driven portfolio of 20+ real-world Python and web projects, making me a strong fit.

Technical Skills

- Programming Languages: Python, JavaScript, HTML/CSS
- Frameworks & Libraries: Flask, CustomTkinter, MediaPipe, scikit-learn, ReportLab, python-docx
- Tools & Platforms: Git & GitHub, Docker, Node.js, Pyodide, VS Code
- Databases: SQLite
- AI/ML Technologies: Gemini API, Anthropic Claude API, MobileNetV2 (transfer learning), scikit-learn

Soft Skills

- Problem Solving & Independent Debugging
- Time Management & Self-Direction
- Attention to Detail & Design Sensibility
- Adaptability (quick to migrate tools/APIs as needed)
- Communication & Documentation

Professional Experience

NoviTech R&D Pvt. Ltd., Coimbatore

2026

Role: Full Stack Development Intern (Internship ID: FSDINU370) — Supervisor: Dr. D. Bhuvaneswari

- Worked on full stack development tasks as part of a structured internship curriculum
- Collaborated with internship supervisor on project milestones and deliverables
- Produced internship documentation, including a day-wise curriculum log and internship report
- Applied Python and web development skills to real project tasks
- Maintained accurate records and certificate documentation for the internship

Final Year Project — TruthLens

2026

Role: Project Lead / Developer

- Built a fake news detection system using Flask and scikit-learn
- Trained and validated a classification model on a dataset of ~54,000 news articles
- Developed a companion Chrome extension for in-browser detection
- Packaged the application with Docker for portable deployment
- Authored a full project report and PowerPoint presentation for final submission

Role: Developer

- Designed and built 20+ Python desktop and computer vision applications, including a drowsiness monitor (Study Guardian), a face-recognition attendance system, a plant disease classifier, and a gesture-based virtual keyboard
- Built R.A.V.A.N.A., an AI desktop voice assistant with a redesigned glassmorphic UI and wake-word handling
- Created a portfolio website presenting the projects, running 14 of them live in-browser via a Pyodide Python runtime
- Generated matching presentation decks for each project using a custom Node.js/pptxgenjs pipeline

Impact:

- Delivered a 20-project portfolio spanning desktop apps, computer vision, and AI tooling
- Made 14 projects runnable directly in-browser, improving accessibility for reviewers

Education

Bachelor of Science, Computer Science

SRM Arts and Science College, University of Madras — Final Year

Awards & Accomplishments

- Completed a full independent portfolio of 20 real-world Python and computer vision applications
- Selected for Full Stack Development internship at NoviTech R&D Pvt. Ltd.
